

Arista WAPCheck Appliance Server:

Arista WAPCheck appliance server is one of the best WAP browser testing tools in the industry, developed by Arista Enterprises LLC and certified (pending) by CCF as a mobile browser validation platform based on OMA specifications.

Arista WAPCheck appliance server allows mobile handset manufacturers, mobile service providers, and certification labs to prove and accept validation for mobile WAP browser capability according to CCF and OMA specifications. With an ever-increasing demand for WAP-enabled handsets throughout the world, mobile handset manufacturers must be able to rely on an accurate validation platform for their WAP browser features in order to satisfy their customers' need for faster and more reliable access to a wide array of WAP-enabled services.

Arista WAPCheck is that reliable WAP mobile browser validation platform.

Hardware Platform:

1U Rack mount Intel®-based Server

Arista WAPCheck features:

- Secured server administration through proper authentication, access control, and filtering.
- Comprehensive server-side log view available during the testing.
- Flexible web-based interface for operation, maintenance, and troubleshooting (ping, trace, route, etc.).
- Administrator can add new profile for tester and mobile.
- Test results stored directly on the server or can be exported to PDF or CSV format for future analysis.
- Flexible web-based configuration of Server IP, Sub-Net Mask, and Router Address which permits rapid integration into existing network.
- Integrated **Go-Along Page** allows tester to post pass/fail verdict and compare side-by-side to detailed OMA/CCF specifications (included).
- Each test mobile validation process is identified as "**New Test Run.**"
- "**Test Run Summary**" option provides snapshot overview of a specific Test Run via chart.
- Testing can be paused and resumed at any point.
- "**Software Update**" option communicates with Arista Software Release Depot and downloads the latest software package.
