

Arista WAPPush Appliance Server:

Arista WAPPush appliance server is the only WAP push validation server in the industry, developed by Arista Enterprises LLC and certified (pending) by CCF as a mobile WAP push validation platform based on OMA specifications.

Arista WAPPush appliance server allows mobile handset manufacturers, mobile service providers, and certification labs to prove and accept validation for WAP push functions according to CCF and OMA specifications. With an ever-increasing demand for WAP-enabled handsets throughout the world, mobile handset manufacturers must be able to rely on an accurate validation platform for their WAP push features in order to satisfy their customers' need for faster and more reliable access to a wide array of WAP-enabled services.

Arista WAPPush is that reliable WAP push validation platform.

Hardware Platform:

1U Rack mount Intel®-based Server

Arista WAPPush features:

- Secured server administration through proper authentication, access control, and filtering.
- Comprehensive server-side log view available during testing.
- Administrator can add new profile for tester and mobile.
- Test results stored directly on the server or can be exported to PDF or CSV format for future analysis.
- Flexible web-based configuration of Server IP, Sub-Net Mask, and Router Address which permits rapid integration into existing network.
- Integrated **Go-Along Page** allows tester to post pass/fail verdict and compare side-by-side to detailed OMA/CCF specifications (included).
- **“Test Run Summary”** option provides snapshot overview of a specific Test Run via chart.
- Testing can be paused and resumed at any point.
- **“Software Update”** option communicates with Arista Software Release Depot and downloads the latest software package.

Note: Agilent 8960 is required for Arista WAP-Push appliance server
